

University of Rijeka, Faculty of Medicine

Curriculum 2023/2024

Compulsory course

Pharmacology

Study program:	Medical Studies in English (R)
[Razina studija]:	Integrirani prijediplomski i diplomski sveučilišni studiji
Department:	Zavod za temeljnu i kliničku farmakologiju s toksikologijom
Course coordinator:	izv. prof. dr. sc. Pilipović Kristina, dr. med.
Year of study:	3
ECTS:	10.00
Incentive ECTS:	0.00 (0.00%)
Foreign language:	Possibility of teaching in a foreign language

Course information:

The course Pharmacology is a compulsory course in the third year of the Integrated Undergraduate and Graduate University Study of Medicine in English. It consists of 30 hours of lectures, 85 hours of seminars, and 15 hours of practicals - overall 130 hours (10 ECTS).

Course objective

The main aim of the Pharmacology course is to provide the acquisition of necessary knowledge in the area of basic and special pharmacology, as well as in the area of pharmacotoxicology and rational pharmacotherapy. The objective of the course is for the students to acquire knowledge on the mechanisms of drug actions, their therapeutic and adverse effects, routes of drug administration as well as regarding the indications and contraindications for the use of the most important groups of drugs. The students should also at the end of the course understand the pharmacological characteristics of "prototype" drugs for each pharmacotherapeutic class. Additionally, each student must obtain the skill of prescribing different drug formulations and the ability to use relevant sources of pharmacology literature as a critical approach concerning the quality of each drug.

Course content:

Basic pharmacology: basic pharmacological terms, pharmacology disciplines, drug nomenclature, mechanisms of drug action, pharmacokinetics, factors affecting drug effects

Special pharmacology: pharmacodynamics, pharmacokinetics, indications, contraindications and adverse effects of the most important pharmacological drug groups and particular drugs

Toxicology: drug toxicology

General principles of clinical pharmacology: drug discovery and development, preclinical and clinical trials

Pharmacography: legal regulations and rules of prescribing different drug formulations

Course learning outcomes

I. Cognitive domain - knowledge

After having passed the Pharmacology course, students should be able to:

1. describe and explain the general principles of pharmacodynamics and pharmacokinetics,
2. list and describe different factors that modify drug effects,
3. define and explain the types and mechanisms of drug interactions,
4. classify drugs in different groups/subgroups,
5. define, describe and explain the routes of administration, the mechanisms of action at the molecular and cellular level, pharmacological effects on different organ systems, the main therapeutic indications and contraindications, the most important adverse effects and toxicity of particular drugs that are illustrative examples of pharmacotherapeutic groups and subgroups they belong to,
6. analyze pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs which belong to different subgroups within the same drug groups and then compare them,
7. describe the symptoms and therapy of clinically the most important drug poisonings,
8. list clinically important drug interactions, and
9. describe and explain the process of new drug discovery and development.

II. Psychomotor domain - skills

After having passed the Pharmacology course, students should acquire the skills of prescribing different drug formulations

List of assigned reading:

1. Katzung BG, Edit., Basic & Clinical Pharmacology, 14 th Edition, McGraw-Hill Education, New York, USA, 2018.
2. Bradamante V, Klarica M, Šalković-Petrišić M, Edits. Pharmacology Manual, 1st Edition in English, Medicinska naklada, Zagreb, 2010.

List of optional reading:

1. Ritter J., Flower R, Henderson G, Rang H. Rang & Dale's Pharmacology, 8th Edition, Elsevier, Churchill Livingstone, London, UK, 2015.

Curriculum:

Predavanja list (with titles and explanation):

L1 Introductory Lecture; Pharmacology - Disciplines; Nature, development and regulation of drugs

To acquaint students with the content and aims of the course and the Syllabus. To inform students about their rights and obligations. To be able to define and explain certain disciplines of Pharmacology. To be able to define and explain the development process and individual stages of research of new drugs

L2 Drug Nomenclature; Transfer of Drugs Across Cell Membranes; Drug Administration, Absorption and Distribution

To be able to explain the features of drug names. To be able to define and explain different routes of drug application. To understand and explain how the drugs pass through cell membranes. To acquire knowledge about the distribution of drugs in the blood and tissues.

L3 Biotransformation and Elimination of Drugs; Pharmacogenomics

To know and explain the reactions involved in the process of biotransformation of drugs. To know and understand the basic principles of pharmacogenomics. To know and explain drug elimination pathway

L4 Drugs and Organism Characteristics Affecting Drug Activity; Allergic and Idiosyncratic Reactions

To describe and explain the influence of chemical structure, doses, route, and time of drug administration on its activity. To list and explain the mechanisms of drug-drug interactions. To explain the influence of age, body mass, and sex on drug activity. To differ, understand, and explain the characteristics of allergic and idiosyncratic reactions.

L5 Adrenoreceptor Agonists and Sympathomimetic Drugs; Adrenoreceptor Antagonist Drugs

To describe and explain the routes of administration of adrenergic receptor agonists and antagonists as well as other sympathomimetics and sympatholytics, mechanisms of their action, pharmacological effects, main indications, contraindications, side effects and toxicity of certain drugs which are an illustrative example of this pharmacotherapeutic group. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

L6 Antipsychotics; Lithium and the Other Drugs in the Treatment of the Bipolar Disorder

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

L7 Nonsteroidal Anti-Inflammatory Drugs, Disease-Modifying Antirheumatic Drugs, Nonopioid Analgesics, & Drugs Used in Gout

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

L8 Opioid Agonists and Antagonists

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

L9 Sedative-Hypnotic Drugs; Anxiolytics

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the

mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

L10 Antiseizure Drugs; Drugs of Abuse

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them. To acquire basic knowledge concerning different drugs of abuse and the principles of their toxicity, as well as the symptoms and the treatment of poisonings by them.

Seminarske vježbe list (with titles and explanation):

SEMINAR-PRACTICAL: Diuretic Agents; Antihypertensive Agents

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

Seminari list (with titles and explanation):

S1 Drug receptors & Pharmacodynamics; Pharmacokinetics & Pharmacodynamics: Rational Dosing & the Time Course of Drug Action

To list and explain the structure of different receptor classes.

To explain the effects of stimulation of different receptors.

To acquire the knowledge concerning basic pharmacodynamic terms and principles.

To list, define, and explain basic pharmacokinetic terms and principles

S2 Cholinoceptor-Activating & Cholinesterase-Inhibiting Drugs; Cholinoceptor-Blocking Drugs; Skeletal Muscle Relaxants

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S3 Adrenoceptor Agonists & Sympathomimetic Drugs, Adrenoceptor Antagonist Drugs

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to.

To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S4 Antipsychotic Agents & Lithium; Antidepressant Agents; Drugs Used in Alzheimer's disease

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S5 General Anesthetics; Local Anesthetics; Pharmacologic Management of Parkinsonism & Other

Movement Disorders

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S6 Drugs Used in Asthma; Histamine, Serotonin & the Ergot Alkaloids; H1-Receptor Antagonists

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S7 Drugs Used in Disorders of Coagulation; Agents Used in Cytopenias; Hematopoietic Growth Factors

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S8 Drugs Used in Heart Failure; Agents Used in Cardiac Arrhythmias

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S9 Vasodilators & the Treatment of Angina Pectoris; Agents Used in Dyslipidemia

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S10 Hypothalamic & Pituitary Hormones; Thyroid & Antithyroid Drugs; Adrenocorticosteroids & Adrenocortical Antagonists

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S11 The Gonadal Hormones/Inhibitors; Agents that Affect Bone Mineral Homeostasis

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S12 Pancreatic Hormones & Antidiabetic Drugs; Drugs Used in the Treatment of Gastrointestinal Diseases

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S13 Beta-Lactam and Other Cell Wall- & Membrane-Active Antibiotics; Tetracyclines, Macrolides, Clindamycin, Chloramphenicol, Streptogramins, & Oxazolidinones; Aminoglycosides & Spectinomycin; Sulfonamides, Trimethoprim & Quinolones

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them

S14 Antimycobacterial Drugs; Antifungal Agents; Antiviral Agents; Antiprotozoal Drugs; Clinical Pharmacology of the Anthelmintic Drugs

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S15 Miscellaneous Antimicrobial Agents; Disinfectants, Antiseptics, & Sterilants; Cancer Chemotherapy

To describe and explain the routes of administration, the mechanisms of action, pharmacological effects, the main indications and contraindications, adverse effects, and toxicity of particular drugs that are illustrative examples of the mentioned pharmacotherapeutic groups they belong to. To analyze the pharmacological effects, pharmacokinetic profile, adverse effects, indications, and contraindications between the drugs that belong to different subclasses within the same drug groups and then compare them.

S16 Over-the-Counter drugs; Dietary Supplements; Herbal Remedies; Homeopathic Remedies

To describe and explain the regulatory aspects related to the use of these preparations; to explain the concept and significance of over-the-counter drugs; to explain the clinical aspects of herbal products and dietary supplements; to understand the basic principles of application of homeopathic remedies.

S17 Vaccines; Immune Globulins and Other Complex Biologic Products; Immunopharmacology

To describe and explain the importance of the use of drugs of the above groups, the mechanism of their action, pharmacological effects, main indications, contraindications, side effects and potential toxicity.

Vježbe list (with titles and explanation):

PRACTICAL 1: Pharmacography: Drug Formulations (Pharmaceutical Formulations); Pharmaceutical Formulations as Systems for Drug Administration; General Drug Prescription Guidelines; Prescribing "Apothecary" and Galenic Preparations

To list and describe different drug formulations.

To define and describe general drug prescription guidelines and legal regulations.

To acquire the skill of prescribing "apothecary" and galenic preparations.

PRACTICAL 2: Pharmacography: Prescribing Finished Drug Products

To acquire the skill of prescribing different finished drug products.

Student obligations:

Students are obligated to regularly attend and actively participate in classes. Students are allowed to be absent at a maximum of 30 hours of seminars + practicals. It is compulsory to follow and act in accordance with notifications and rules regarding attendance, absence, midterm exams I and II, corrections of midterm exams, final exam, etc., which will be presented at the first lecture. Additional information and rules will be announced on a regular basis and on time on the SharePoint portal of the Department and on Merlin platform

Exam (exam taking, description of the written/oral/practical part of the exam, point distribution, grading criteria):

During the classes of Pharmacology, a student can achieve a maximum of 70% (70 points) of their final grade, while the remaining 30% (30 points) of the grade is obtained at the final exam. Points distribution is as follows:

Midterm exam I=35 points

Midterm exam II=35 points

Total (classes)=70 points

Pre-exam colloquium in pharmacography and final exam=30 points

Total (course)=100 points

A. Midterm exams

Midterm exam I includes the topics covered at L1-L10 and S1-S7. It consists of a written test (Test I). Test I will be held on **January 10, 2023**.

Midterm exam II includes the topics covered at S8-S17 and SP1. It consists of a written test (Test II) Test II will be held on **May 23 or May 31, 2023**.

The exact time and the venues for the tests will be announced beforehand.

Tests are evaluated according to the scheme:

Test I

Number of correct answers	Number of points
49,50	35
47,48	34
45,46	33
43,44	32
41,42	31
39,40	30
37,38	29
35,36	28
34	27
33	26
32	25
31	24
30	23
29	22
28	21
27	20
26	19
25	18
0-24	0

Test II

Number of correct answers	Number of points
49,50	35
47,48	34
45,46	33
43,44	32
41,42	31
39,40	30
37,38	29
36	28
35	27
34	26
33	25
32	24
31	23
30	22
29	21
28	20
27	19
26	18
25	17
0-24	0

Corrections of the midterm exams

Students can access the corrections of the midterm exams if they did not pass them or are not satisfied with the obtained points. If a student retakes the midterm exam because they are not satisfied with the obtained grade points, only the grade points obtained at the retaken midterm exam(s) will be considered as valid. Students will have the opportunity to correct midterm exams I and/or II only once.

Correction of the Tests I and II will be organized on June 27, 2023, and June 29, 2023, respectively. Exact times and venues will be announced in a timely manner.

Students are obligated to apply for the correction/s of the midterm exams. The applications will be received until June 21, 2023, by 12 noon. If students apply for the correction/s of the midterm exam I and/or II and subsequently decide that they will not be able to access it, they must personally cancel it at the latest until one workday before the term of the midterm exam/s I and/or II until 12 noon. If a student does not personally cancel the application for the correction/s of the midterm exams, their final score will be 0 points.

Exceptionally, corrections of the midterm exams will also be organized for the students who are absent from the midterm exams due to a justified reason. In that case, they must submit a written explanation and appropriate documentation. The materials have to be addressed to Assoc Prof Kristina Pilipović, recorded in the Registry Office of the Faculty and submitted to the Office of the Department, until June 16, 2023, at 3 p.m.

B. Pre-exam Colloquium in Pharmacography

The pre-exam colloquium in Pharmacography includes material covered during P1-2 and consists of a written and an oral part. On the written test, the task will be to correctly prescribe four prescriptions. The oral part of the colloquium can be accessed only by a student who correctly prescribes at least two prescriptions. For each correctly prescribed recipe, the student will receive 0.25 points (maximum 1 point). Each part of the colloquium (both written and oral) must be positively graded for the colloquium to be considered passed. Students unsatisfied with the result achieved at the pre-exam colloquium in Pharmacography can apply for the correction only once, in one of the scheduled terms. In that case, the number of points earned on the correction will be counted as the final result!

Pre-exam colloquia in Pharmacography will be held on: June 16, 2023, June 30, 2023, July 14, 2023, September 5, 2023 and September 19, 2023. The time and places of these colloquia will be subsequently announced.

C. Final exam

Only students who have achieved at least 35 points during the course can take the final exam in Pharmacology. Students with less than 35 credits earned during the course must enroll in the course Pharmacology again in the next academic year. The final exam consists of two parts: a final test and an oral exam. Each part of the final exam must be positively graded for the exam to be considered passed!

Final test is evaluated according to the scheme:

Number of correct answers	Number of points
66-70	9
61-65	8
55-60	7
49-54	6
42-48	5
35-41	4
0-34	0

Students who do not answer at least 50% of the test questions correctly cannot access the oral part of the final exam.

Oral part of the final exam

The maximum number of points that can be obtained at the oral exam is 20 (range 10-20). For the grade 2 (sufficient), the student obtains 10 points; for the grade 3 (good), the student obtains 13 points; for the grade 4 (very good), the student obtains 16; for the grade 5 (excellent), the student obtains 20 points.

The final grade

The final grade is formed based on the results obtained during the course and the grade obtained at the final exam, according to the following scheme:

Percent/credits for acquired knowledge, ECTS system		Numerical grading system	
skills and competences (course+final grade)			
A	90-100%	5 (excellent)	
	75-89,9%	4 (very good)	B
	60-74,9%	3 (good)	C
	50-59,9%	2 (sufficient)	D
	0-49,9%	1 (insufficient)	F

Other notes (related to the course) important for students:

Academic honesty

It is expected that all students and teachers follow the code of academic honesty in accordance with the Code of Ethics for the students of the Faculty of Medicine at the University of Rijeka. Please read the policy regarding academic honesty at: <http://medical-studies-in-english.com/wp-content/uploads/2016/12/CODEOF-ETHICS.pdf>

Contact information

For all questions and concerns, students are encouraged to contact us by e-mail or personally.

List of lectures, seminars and practicals:

PREDAVANJA (TOPIC)	Number of hours	Location
L1 Introductory Lecture; Pharmacology – Disciplines; Nature, development and regulation of drugs	3	P01
L2 Drug Nomenclature; Transfer of Drugs Across Cell Membranes; Drug Administration, Absorption and Distribution	3	P01
L3 Biotransformation and Elimination of Drugs; Pharmacogenomics	3	ONLINE
L4 Drugs and Organism Characteristics Affecting Drug Activity; Allergic and Idiosyncratic Reactions	3	P15 - VIJEĆNICA
L5 Adrenoreceptor Agonists and Sympathomimetic Drugs; Adrenoreceptor Antagonist Drugs	3	P01
L6 Antipsychotics; Lithium and the Other Drugs in the Treatment of the Bipolar Disorder	3	P15 - VIJEĆNICA
L7 Nonsteroidal Anti-Inflammatory Drugs, Disease-Modifying Antirheumatic Drugs, Nonopioid Analgesics, & Drugs Used in Gout	3	ONLINE
L8 Opioid Agonists and Antagonists	3	ONLINE
L9 Sedative-Hypnotic Drugs; Anxiolytics	3	P01
L10 Antiseizure Drugs; Drugs of Abuse	3	P02

VJEŽBE (TOPIC)	Number of hours	Location
PRACTICAL 1: Pharmacography: Drug Formulations (Pharmaceutical Formulations); Pharmaceutical Formulations as Systems for Drug Administration; General Drug Prescription Guidelines; Prescribing "Apothecary" and Galenic Preparations	5	P04 Zavod za temeljnu i kliničku farmakologiju s toksikologijom
PRACTICAL 2: Pharmacography: Prescribing Finished Drug Products	5	P06 Zavod za temeljnu i kliničku farmakologiju s toksikologijom

SEMINARI (TOPIC)	Number of hours	Location
S1 Drug receptors & Pharmacodynamics; Pharmacokinetics & Pharmacodynamics: Rational Dosing & the Time Course of Drug Action	5	Zavod za temeljnu i kliničku farmakologiju s toksikologijom
S2 Cholinoceptor-Activating & Cholinesterase-Inhibiting Drugs; Cholinoceptor-Blocking Drugs; Skeletal Muscle Relaxants	5	Zavod za temeljnu i kliničku farmakologiju s toksikologijom

S3 Adrenoceptor Agonists & Sympathomimetic Drugs, Adrenoceptor Antagonist Drugs	5	P14 - PATOLOGIJA predavaonica Zavod za temeljnu i kliničku farmakologiju s toksikologijom
S4 Antipsychotic Agents & Lithium; Antidepressant Agents; Drugs Used in Alzheimer's disease	5	ONLINE Zavod za temeljnu i kliničku farmakologiju s toksikologijom
S5 General Anesthetics; Local Anesthetics; Pharmacologic Management of Parkinsonism & Other Movement Disorders	5	P07 Zavod za temeljnu i kliničku farmakologiju s toksikologijom
S6 Drugs Used in Asthma; Histamine, Serotonin & the Ergot Alkaloids: H1-Receptor Antagonists	5	Zavod za temeljnu i kliničku farmakologiju s toksikologijom
S7 Drugs Used in Disorders of Coagulation; Agents Used in Cytopenias; Hematopoietic Growth Factors	5	ONLINE
S8 Drugs Used in Heart Failure; Agents Used in Cardiac Arrhythmias	5	Zavod za temeljnu i kliničku farmakologiju s toksikologijom
S9 Vasodilators & the Treatment of Angina Pectoris; Agents Used in Dyslipidemia	5	Zavod za temeljnu i kliničku farmakologiju s toksikologijom
S10 Hypothalamic & Pituitary Hormones; Thyroid & Antithyroid Drugs; Adrenocorticosteroids & Adrenocortical Antagonists	5	P06 P07
S11 The Gonadal Hormones/Inhibitors; Agents that Affect Bone Mineral Homeostasis	5	P04
S12 Pancreatic Hormones & Antidiabetic Drugs; Drugs Used in the Treatment of Gastrointestinal Diseases	5	P06 P07
S13 Beta-Lactam and Other Cell Wall- & Membrane-Active Antibiotics; Tetracyclines, Macrolides, Clindamycin, Chloramphenicol, Streptogramins, & Oxazolidinones; Aminoglycosides & Spectinomycin; Sulfonamides, Trimethoprim & Quinolones	5	P06 P07
S14 Antimycobacterial Drugs; Antifungal Agents; Antiviral Agents; Antiprotozoal Drugs; Clinical Pharmacology of the Antihelminthic Drugs	5	P07
S15 Miscellaneous Antimicrobial Agents; Disinfectants, Antiseptics, & Sterilants; Cancer Chemotherapy	5	P07 Zavod za temeljnu i kliničku farmakologiju s toksikologijom
S16 Over-the-Counter drugs; Dietary Supplements; Herbal Remedies; Homeopathic Remedies	5	P06 Zavod za temeljnu i kliničku farmakologiju s toksikologijom
S17 Vaccines; Immune Globulins and Other Complex Biologic Products; Immunopharmacology	5	P05 Zavod za temeljnu i kliničku farmakologiju s toksikologijom

SEMINARSKE VJEŽBE (TOPIC)	Number of hours	Location
SEMINAR-PRACTICAL: Diuretic Agents; Antihypertensive Agents	5	P04 Zavod za temeljnu i kliničku farmakologiju s toksikologijom
